

e-Government by Origen

The many years that Origen has spent in Local Government has enabled us to understand the repercussions of a Local Authority e-strategy implementation.

To begin understanding the issues faced with e-Government, it is first necessary to understand the changes that need to be undertaken within the council.

Don't let vendors sell you the story that their software has all the answers – It's only part of the story!

- There is no smooth transition from “government” to “e-government.” In changing from just a presence on the Web to a profound transformation, with new services and processes and a seamless integration inside and across module silos, Local Authorities need to evolve through four e-phases.
- Progressing through e-phases implies increasing cost and complexity, but also greater customer value
- Most of the technology challenges are faced in Phase 3, when online transactions require unprecedented reliability, availability and security levels. Few ERP solutions available today are capable of enabling the more advanced Transaction and Transformation phases, Origen provides software *and* consulting experience to ensure that this phase is successful.
- Providing superior functionality with truly integrated modules that are proven in New Zealand Local Authorities Origen provides the tools and technology required as the backbone to your e-Government initiatives.
